Although your countertop will be professionally measured before we fabricate it, the steps below will help us generate an accurate quote for your countertop. We appreciate the opportunity!

How to measure for a quote:

1. Draw the basic Shapes of your tops on the back of this sheet.
2. Mark Sink location and Stove location. Please indicate the type of stove (cooktop, free standing range, Slide in range, etc.)
3. Mark with an (X) all finished edges. And an (S) for backsplash.
4. Mark any special cuts (rounded, or clipped corners, etc.)
5. Measure the length of each top along the back wall
6. Measure the width of each section of top.
7. We do not need exact measurements for cooktop and sink at this time.

Below is an example. We have graph paper on the reverse of this sheet for your convenience.
